LORIMA : Company profile

City: **Lorient (Brittany)**

Activity: **Manufacturer of carbon made masts and spars**

Manager: **Vincent Marsaudon**

Presentation of the Project's Partner Company

Based in Lorient, cradle of offshore racing in France, LORIMA is a world leader of the manufacturing of carbon made masts for both racing and cruising ships.

From racing ships for the company development, to luxurious superyacht for the brand image, all our clients get to enjoy Lorima's advanced technology, whether they own a 35 or a 145 feet. LORIMA is constantly improving its process and the quality of its carbon made masts and spars.

LORIMA's masts are built with a "One-Shot" process from carbon fiber in a 38 m (124 ft) long autoclave.

Light and aesthetics but able to support extreme conditions, Lorima's products are made possible by high-end technology combined with a team dedicated to the success of the projects our clients tasked us with.

Involvement in the project

Lorima will provide a section of the prepreg mast cured in an autoclave and will be in charge of the assembling and the fitting
