

**MULTIPLAST: Company profile**

City: **Vannes (Brittany)**

Activity: **Composite materials**

Manager: **Dominique Dubois**

***Presentation of the Project's Partner Company***

Multiplast, a company of the Carboman Group (160 employees), have been specialized in the production of composite material parts for nearly 40 years. Well known for the production of large competition multihulls (Gitana, Sodebo, Idec, etc.), Multiplast has diversified its activities a lot and is now also involved in aeronautics (construction of the fuselage of the world's first 100% electric commercial aircraft for the Eviation company), defense, construction (domes of the Russian Orthodox Cathedral in Paris), industry and services.

***Involvement in the project***

Alongside Chantiers de l'Atlantique, Multiplast has participated since the beginning in the development of the sails and rigging of future cruise ships within the framework of research projects financed by the Brittany and Golfe-du-Morbihan-Vannes-Agglomération regions. Multiplast thus produced the prototype sails that validated the concept of these large sailing liners.
